

The Icarus Model 9605 Rated **ecodesign**

The *Icarus* wood burning stove combines the most beautiful flame picture with clean burn technology and finest British engineering. Sit back in your favourite chair with a cup of tea and feel the stresses of the day melt away in front of the relaxing flames and warmth radiating through the full length cathedral window.

2022 approved and exceeding the requirements of **Ecodesign**, reinforced by **Burley's** environmental policies, the *Icarus* assures you that you have made a green, clean burning and fuel efficient choice.

Made with pride in the UK

Cut by laser, formed by computer and welded by robot, the *Icarus* delivers technical precision as standard. The 5mm plate steel sections are so perfectly seam welded that they are actually melted and fused together to make one solid piece. **Burley** endeavour to buy British steel, the castings are made in a British foundry, 100% of the fabrication is made in our factory in Oakham, even the beech wooden handle is turned in Devon.

The **Icarus** Model 9605
 Rated **ecodesign**

Room sealing

Most stoves draw their air from the room, air which you have already paid to heat. This warm air is replaced by cold air creeping around doors and windows. An open flue will suck all the air from your room once every hour, 24 hours a day.

The *Icarus* however can very easily be room sealed so the air is drawn from outside, this means all the lovely warmth drifts outwards, not only warming your room, but also your entire home.

It is **Burley's** environmental policy to only make stoves which can be room sealed.
